

**Note to Readers:** The mean duration of an interview was 50-60 minutes. Even though the questions were targeted to answer within the estimated time given below, the participants liked to talk more. Therefore, the estimated time != actual time spent on a specific question. Also, there were multiple followup questions asked upon the answers given by each participant to the main question. The interview consisted of questions which were out of scope of this particular study. Below we present only the questions relevant only to this study.

## Interview Guide

Acronyms:

- ASD: Agile Software Development
- RC: Requirements Change

Interview Question	Possible Followups	Derivatives to Meet the Expected Outcome	Estimated Time
One of the four values of the agile manifesto is “responding to change over following a plan”. In your opinion, what does this “change” refer to in the manifesto?	Follow: can you elaborate?	Interpretation of “change” as referred in agile manifesto	5 mins
In your experience, what different types of changes do you come across in ASD?	Follow (nothing changes): What about RCs?	Taxonomy of RC	5 mins
Yeah, those are all different types of changes. My research focuses on these RCs in agile projects.  In your words, what is an RC?  In what shape or format does an RC come? [shape/format: epic/user stories/use cases/features/tasks]  Thinking of a recent agile project you were a part of, how did an RC travel through the project? [alt: what was the typical journey/process flow of an RC?		Taxonomy of RC	10 mins
Anything else about RC or changes in agile in general?
